

# Quad RS232 Board

The Quad board is a self-contained RS232 independent 4 port unit which has an on-board power regulator so that it can be powered by a 7-16vdc supply or it can be powered by a 5v source. The RS232 ports are configured as DCE (data communication equipment) similar to modem type devices usually with female serial connections. PC serial communication ports which usually have male connections are considered DTE (data terminal equipment).

DCE configuration for each port:

## Example usage
